

NEXLER Most+

Heat-weldable bituminous felt

TECHNICAL DATA

Type of reinforcement	non-woven polyester
Top finishing	coarse grained
Low temperature flexibility	≤ -20°C
Width	≥ 0,99 m
Thickness	(5,5 ± 0,5) mm
Reaction to fire	class E
Watertightness: water absorption	≤ 0,3%
Maximum tensile force:	
- longitudinal elongation	1250 ± 150 N/50 mm (55 ± 15) %
- transversal elongation	950 ± 150 N/50 mm (60 ± 15) %
Adhesion	≥ 0,5 N/mm ²
Shear strength	≥ 0,2 N/mm ²
Compatibility - in thermal tests	≥ 100%
Capacity to bridge cracks:	
- ability to protect cracks in the substrate	type 3
- requirements met at temp.	≤ -10°C
Resistance to heat impact	≤ 0,8 mm
Resistance to perforation (compaction)	requirements met (method 2)
Durability:	
- water absorption	≤ 0,3%
- thermal ageing behavior as follows:	
flexibility at low temperature	≤ -10°C
flow resistance at elevated temperature	(100 ± 10)°C
- compatibility by heat conditioning	≥ 100%
Cold bending behavior	≤ -20°C
Dimensional stability	≤ 0,5%
Reference document(s)	EN 14695:2010

PROPERTIES

- Double SBS modification
- Durable and puncture-resistant
- For use in reduced ambient temperatures
- Flexible in a wide temperature range
- Fixed by welding

12-YEARS WARRANTY

2xSBS

HIGH DURABILITY

WELDING

APPLICATION

- Single-layer waterproofing for concrete surfaces intended for vehicular traffic, such as parking lots and garages

FOR BRIDGES

FOR PARKING LOTS

PACKAGING

Poland

- Roll length: 10 m
- Quantity per pallet: - 12 rolls (120 m²)

Export

- Roll length: 10 m
- Quantity per pallet: - 12 rolls (120 m²)

METHODS OF USE

▪ CONDITIONS OF USE

Making an insulation using **NEXLER Most+** bituminous felt should be carried out according to the technical design, in accordance with the current building regulations and the detailed guidelines for the design and execution of insulation contained in NEXLER Insulation Systems and the Technical Data Sheet.

The bituminous felt should be installed in ambient temperatures of above +5°C, this requirement applies to the time of day and night.

Do not carry out insulation work during strong winds and precipitation.

▪ SUBSTRATE PREPARATION

The quality assessment criteria for cement concrete substrates on which insulation may be installed are as follows:

- strong substrate (substrate strength tested using the "pull-off" method is at least 1,0 MPa),
- dry substrate (concrete is in air-dry condition, without visible traces of moisture and darkening caused by moisture); if the NEXLER EPOLIS EP 601 resin primer is used, insulation may also be installed on matt damp substrates, the concrete surface should be uniformly dark and matt, without light spots and water puddles,
- clean substrate (concrete surface is free from loose fractions, dust, oil stains, grease and other contaminants),
- smooth substrate (local unevenness and cavities on the concrete surface do not exceed ± 5 mm),
- even substrate (the gaps between the surface of the substrate and a 4 m long patch placed on the concrete substrate do not exceed 10 mm).

Before welding the **NEXLER Most+** bituminous felt, the substrate must be primed.

▪ PRODUCT CONTROL

The product should not raise any objections. The roll should be evenly rolled, without kinks.

▪ PRODUCT PREPARATION

If it is necessary to make the covering at low ambient temperatures, it is recommended to store the rolls in heated rooms at a temperature of not less than +18°C for 24 hours before installation.

▪ APPLICATION METHOD

NEXLER Most+ bituminous felt should be fixed by welding to a concrete substrate primed with NEXLER Penetrator G7 bituminous primer or a resin primer, e.g. NEXLER EPOLIS EP 601. A substrate primed with a resin primer should not be re-primed with a bituminous primer and vice versa, a substrate primed with a bituminous primer should not be re-primed with a resin primer. The consumption of priming agents is specified in the product Technical Data Sheets.

Welding of the bituminous felt sheets should be carried out after the priming agent has completely dried (or cured).

As a result of heating both the substrate and the underside of the bituminous felt with a burner, the thin protective plastic foil melts, the asphalt is slightly melted and the bituminous felt sticks evenly to the substrate. The insulation of engineering structures particularly requires 100% bonding of the bituminous felt underside with the primed substrate. Maintain a bituminous felt overlap min. 8 cm wide along the length of the felt strip and an overlap min. 15 cm wide at the joint perpendicular to the length of the felt strip. Overlaps of the bituminous felt at joints perpendicular to the length of the bituminous felt on adjacent sheets should be offset from each other by at least 50 cm.

On railway bridge structures, pavements of road bridge structures and structures covered with soil, e.g. culverts, retaining walls, rear walls of bridge abutments, etc., protective layers should be made on the bituminous felt insulation, e.g. protective layers of cement concrete 5 cm thick, reinforced with a $\varnothing 6$ mm mesh, with a mesh size of 15 cm x 15 cm.

NEXLER Most+ bituminous felt insulation is permissible to be made in two layers in the following areas: curbs or pavement surfaces and the places where the insulation is reinforced, except for the area under the bridge surface intended for motor vehicle traffic, i.e. the approach slab and the bridge slab, where the **NEXLER Most+** bituminous felt insulation should be made in one layer.

The installation of the bridge deck pavement or protective insulation layer should be carried out as soon as possible. Any technological movement of people and vehicles on the insulation surface, not directly related to the installation of the protective layer or pavement, is prohibited until these layers are completed. Storage of materials and tools on the completed bituminous felt insulation, as well as parking of vehicles and construction machinery, is not permitted. The protective layer should be made according to the road design.

▪ CONTROL OF PERFORMANCE

During acceptance, the following should be checked:

- correctness of welding of overlaps - a continuous trickle of melted asphalt mixture on the overlaps is required,
- adhesion of the bituminous felt to the substrate.

WARRANTY

The manufacturer NEXLER sp. z o.o. provides the direct purchaser of **NEXLER Most+** bituminous felt:

- a standard material warranty of 12 years.

Details of the warranty provided to the purchaser are contained in the guarantee card. Exercising the rights under this warranty is subject to using the bituminous felt in compliance with the applicable construction regulations, the Technical Data Sheet, and as per the intended use of the product as specified in the project and the PN-EN 14695 standard.

TOOLS AND TOOL CLEANING

Roofing gas burner, bituminous felt uncoiler.

STORAGE AND TRANSPORT

The rolls of **NEXLER Most+** bituminous felt are protected with packing tapes before unrolling. Each roll has a label with the required data on it. The rolls are placed vertically on wooden industrial pallets and foiled.

During transportation and storage, the rolls must be protected from moisture and exposure to sunlight, and be placed upright in one layer in a way preventing any dislocation or damage.

The bituminous felt rolls must be stored on a flat surface at a distance of at least 120 cm from radiators.

Transportation must be carried out in compliance with applicable shipment safety regulations.

NOTES

Works should be carried out in accordance with technical conditions, manufacturer's instructions, health and safety standards and regulations.

Before welding the bituminous felt, take notice of whether the next roll to be rolled out does not differ in the shade of the sprinkle. The sprinkle is a natural raw material and may vary in shade.

IMPORTANT INFORMATION

The Environmental Product Declaration (EPD) for the company NEXLER, covering both top layer and underlayer bituminous felt, was developed by the Building Research Institute (ITB) in accordance with international standards ISO 14025 and EN 15804.

Please refer to the detailed conditions of use of the product before use.

We guarantee the quality of our materials as part of our terms of sale and delivery.

For buildings with special requirements that are not covered by this manual, we provide our Customers with our own professional advisory service.

The manufacturer has no influence on the improper use of the material, its use for other purposes or under conditions other than

those described above. The guarantee only covers the quality of the delivered product. The correct and therefore effective use of the product is not subject to our control.

Neither the manufacturer nor his authorized representative may be held liable for any loss incurred as a result of improper use or storage of the product.

Employees of the company are authorized to provide technical information only and solely in accordance with this Technical Data Sheet. Information other than that contained in this sheet should be confirmed in writing.

If you have any doubts, consult the manufacturer.
