

# *Izofol Roof*

Protective and decorative coating

VERY EASY  
ROOF  
RENOVATION

**application  
methods  
and  
tests**

**Izofol Roof** is a protective and decorative coating intended for protecting among others.:

- ▽ bituminous felts
- ▽ asphalt shingles
- ▽ ceramic tiles
- ▽ roofing sheets
- ▽ galvanised sheet metal
- ▽ concrete
- ▽ wood

The product is ready-to-use straight after opening. Application is very easy and does not require the use of professional tools, a brush or a roller is enough. It can be applied with sprayer as well.

NEXLER Izofol Roof gives the applied layer resistance to the detrimental effects of sun exposure, ensuring uniform colour and durability.

Roof surfaces are exposed to large temperature changes, so the material laid on them is exposed to shrinkage and expansion. NEXLER Izofol Roof is highly flexible and adapts to changes, ensuring tightness of the coating.
